

Corporate Energy Policy

In order to achieve the sustainable development, Kanodia Cement Limited (“the company”) strives to be one of the leading cement manufacture with the lowest energy intensity – both thermal and electrical. The company is committed to :-

- Explore use of most energy efficient technologies in all our operation.
- Adhere to all applicable statutory compliances related to energy.
- Continually improve energy efficiency of the process and the equipment.
- Develop and manufacture energy efficient products with the least usage of natural resources by substituting with the alternative fuels and raw material.
- Implement recovery process waste heat for utilization in power generation, drying, heating and cooling requirements.
- Make concerted efforts to minimize the usage of fossil fuels in our operations as well as progressively increase the use of renewable energy to reduce the company’s overall carbon footprint.
- Promote and inculcate a culture of efficient use of energy among internal stakeholders by reducing, recycling and reuse of all forms of energy.
